

Rohidul Islam (Rohid)

Senior React & TypeScript Developer · Full-Stack Engineer

Bangladesh (open to remote) | mail@rohid.dev | rohid.dev | github.com/iam-rohid | linkedin.com/in/rohiddev | x.com/rohiddev

SUMMARY

Senior full-stack engineer specializing in React, React Native, and TypeScript, with 5+ years shipping production web, mobile, and desktop apps end-to-end. Owns features from API and architecture through pixel-perfect UI, with a strong focus on UX, performance, and security.

EXPERIENCE

Full-Stack Developer — WakaTeam Feb 2024 – Nov 2025

- Led the design and launch of Wonderful.dev, a developer-focused social platform now serving **10,000+ users**, built with Next.js and Expo/React Native in a unified TypeScript monorepo.
- Owned the backend API and the entire web frontend, partnering directly with the founder on data architecture and core product decisions.
- Architected and shipped the mobile app **end-to-end and solo** with React Native (Expo) — a single codebase serving both Android and iOS from design through release.
- Expanded the WakaTime ecosystem with a cross-platform suite: a community leaderboard, WTKit (a mobile dashboard surfacing real-time coding stats), and a Windows desktop app built with Electron.
- Delivered an AI-powered Chrome extension for a separate client using React and modern AI APIs.

SELECTED CLIENT WORK

- **Crackboard** — Built a public leaderboard platform for WakaTime (for Alan Hamlett, WakaTime founder), handling the frontend and real-time data presentation.
- **Oaklang** — Engineered an AI-powered language-learning app for vocabulary acquisition and practice, working directly with the founder on product and implementation.
- **Securely** — Rebuilt the frontend UI and end-to-end user flow for a security-focused app, refining the overall experience.
- **Programming Tutorials** — Developed a cross-platform iOS and Android learning app delivering 1,200+ programming video tutorials.

PERSONAL PROJECTS

- SiteAssist.io — An AI platform that lets businesses train a chatbot on their own docs and pages, then embed it with one line of code for automated 24/7 support. Built with Next.js and TypeScript.
- [StoreSway](#) (in development) — An AI App Store designer that turns raw app screenshots into conversion-focused, export-ready screenshot sets. The AI infers an app's selling points, writes benefit-led headlines, designs a cohesive set, and exports every required App Store resolution; users refine the whole set in plain English. Building with React (Tanstack Start) + Convex + AI-SDK.
- [QuizScan AI](#) — Turns lecture notes, PDFs, photos, and YouTube videos into AI-generated practice quizzes with explanations and progress tracking. React Native (Expo) + Convex; YouTube transcript ingestion, document scanner with on-device OCR, Expo share extension, AI-SDK generation, PostHog analytics.
- [PostMind](#) — Share a post screenshot or text into the app to instantly generate AI-powered replies and quotes. React Native (Expo) + Convex + AI-SDK, PostHog analytics.
- [DateSnap](#) — Native SwiftUI app that scans documents with on-device OCR to auto-detect important dates and create reminders. Cloudflare Worker backend + AI-SDK, PostHog analytics.

- [LogoGenie](#) — Generates vector-ready logos in under 60 seconds from a brand description and style preset, with transparent PNG and SVG export. React Native (Expo) with an image-generation model behind a guided wizard.
- [Sonkhipto](#) — A TikTok-style mobile news app delivering AI-summarized articles as bite-sized daily stories in Bangla and English. Built with Expo, React Native, and TypeScript.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Swift

Mobile: React Native, Expo, SwiftUI, on-device OCR, share extensions, push notifications

Frontend: React, Next.js, TanStack Start, SvelteKit, React Native, Expo, Tailwind CSS, TanStack React Query, Zustand

Backend: Node.js, Bun, Hono, NestJS, Convex, PostgreSQL, Redis

AI: Vercel AI SDK, Claude Agent SDK, Mastra, OpenRouter, LangChain, vector databases

DevOps & Tooling: Docker, Git, GitHub Actions, AWS, Cloudflare (Workers), Vercel, Supabase, Firebase, Upstash QStash, PostHog

EDUCATION

University of Asia Pacific — Computer Science & Engineering coursework
